\* Does not apply to the Researcher's Workshop

### 1. Prerequisites

I

No specific prerequisites are required, the student should:

# Basic understanding of mathematical terminologies and logical thinking.

# High School / UG level Calculus, Vector algebra, Linear algebra

### 2. Course objectives

# To familiarize the students with Fundamentals of Machine Learning (ML) to start working on problem solving.
# To familiarize the students with Fundamentals of Machine Learning to start working on applications.
# Giving necessary knowledge to judiciously decide the ML algorithm to be applied in a given real-time problem scenario and analyze the performance of trained ML systems.

| 3. Course content (separate for each type of classes)  |  |  |  |
|--|--|--|--|
| Lecture  |  |  |  |
| Contents (planning)  |  |  |  |
| The feature of this course is Active learning with suitable examples.                            |  |  |  |
| The procedure of each lecture is divided into two parts: <1> Lecture, and <2> Tutorial/Hands-on. |  |  |  |
| For every week - two days (Tuesday and Thursday):  |  |  |  |
| <1> Lecture [5 lecture hours for two days]   |  |  |  |
| - Lecture by the lecturer based on the lecture note.   |  |  |  |
| - Exchanges of learning outcomes among students.   |  |  |  |
| - Extracting contents related to topic of the day.   |  |  |  |
| - Discussing applications.   |  |  |  |

- 4. Laplace Approximation, Generalize Linear Models
  - Perceptron, Multilayer network,
  - Back propagation, introduction to the DNN
- 5. Probability and Bayes Learning
  - Conditional Probability and m-estimate approach
  - Bayes Theorem (Generalized) and Example and Naïve Bayes Classifier and example
- 6. Generative Models for Supervised Learning
  - Wrap up GLM and testing conditional independence in directed graphical models
  - Inference in multi-parameter models, conditional posteriors, local conjugacy

### Tutorial/Hands-on

1. Notions related to "Training" and "Testing" by considering algorithms like Decision Trees.

- 2. Experiment that demonstrates how SVM can yield a solution better than a simple linear separating solution.
- 3. Experiments on Back Propagation and modern library implementations.

4. Experiments on probability and Bayes learning and experiments related to K-Means, by varying in K, and initialization including Hierarchical clustering and types.

| 4. Learning outcomes            |  |  |  |  |
|---------------------------------|--|--|--|--|
| Type of<br>learning<br>outcomes | Learning outcomes description  | Reference to the<br>learning outcomes of<br>the WUT DS | Learning outcomes<br>verification<br>methods*                          |  |
|                                 | Knowledge  |  |  |  |
| K01                             | Familiarize the students with the concept of linear<br>Regression and make them solve the related<br>applications.   | SDW_2, SD_W3   | Through a quiz/test<br>part.   |  |
| K02                             | Assessing prospective growth opportunities. One of<br>the applications of decision trees involves<br>evaluating prospective growth opportunities for<br>businesses based on historical data. | SDW_2, SD_W3   | Through a quiz/test<br>part.   |  |
| К03                             | Familiarize the students using demographic data to find prospective clients.   | SDW_2, SD_W3   | Through a quiz/test part.  |  |
| К04                             | Offering a powerful tool to navigate probabilistic situations and refine artificial models.  | SDW_2, SD_W3   | Through a quiz/test part.  |  |
| K05                             | Familiarize to apply the concept of ANN for (i) Face<br>Recognition, (ii) Neuro-Fuzzy Model and its<br>Applications, and (iii) Data-intensive applications.                                  | SDW_2, SD_W3   | Through Tutorial<br>part/test and<br>discussions on<br>research papers |  |
| Skills                          |  |  |  |  |
| S01                             | Construct suitable training and testing methodologies for various applications.  | SD_U7, SD_U8   | Through Tutorial<br>part (active<br>participation during<br>classes)   |  |
| S02                             | Apply principles of statics and probabilistic models<br>to analyze various applications including healthcare<br>and agriculture.   | SD_U7, SD_U8   | Through Tutorial<br>part (active<br>participation during<br>classes)   |  |

| Social competencies |  |       |   |  |
|---------------------|--|-------|---|--|
| SC01                | Read and summarize literature in this area   | SD_K2 | As mentioned in the<br>Literature   |  |
| SC02                | Explain the working of a few applications such as malaria prediction, heart disease prediction, etc. | SD_K2 | Though discussions<br>on research papers<br>published (active<br>participation during<br>classes) |  |

\*Allowed learning outcomes verification methods: exam; oral exam; written test; oral test; project evaluation; report evaluation; presentation evaluation; active participation during classes; homework; tests

### 5. Assessment criteria

- ✓ Students will review a research paper in the field and summarize the content and key ideas and describe how the paper relates to content of the course. Students will have opportunities for self-assessment throughout the course through pop quizzes conducted for formative assessment.
- ✓ Depending on the content of the submitted reports, it is decided whether excellent, excellent, good, or acceptable.
- ✓ The contents of the submitted report are (1) learning content (especially new knowledge), (2) impressions and opinions (relationship with own research project).
